

## August happenings!

Well, in addition to the monthly Blue Grass Show, the catered Prime Rib Dinner in the Club House, and the Eclipse, Sun Communities has a project under way to solve the high water problems from the 'Thousand Year Storm' of October 2015 and Hurricane Mathews of October 2016. We are all optimistic that this solution will work. As we all know this hurricane season has started with a bang!

Lets start with the eclipse! First of all, where to go to see it? We chose to stay home, but could have gone to the beach, or gone to Charleston or Columbia for a more complete eclipse, but chose to stay home. We felt with the traffic on the road we might get stuck on the highway anyway. So as you can see the best view we got was on the TV, from Columbia, SC. The other picture was taken at home before the eclipse, with cloudy skies! When the eclipse occurred, it was even more cloudy! Needless to say, Charleston and our own beach area had a great view!! So much for that decision!

We enjoyed our monthly Rivertown Blue Grass event as usual. The first picture is of the Lonesome Meadows Band and the second picture was taken in the cafeteria during break time. People can come with their own instruments and participate in jamming sessions in the cafeteria.

The first picture of the construction is where the lake will drain, via the new pipe system, and eventually into the county ditch to avoid the lake from overflowing into the community. The next two pictures follow the route to the ditch way behind the trees in the third picture. We are all optimistic about the results.
